DETAILED ACTION

Allowable Subject Matter

Claims 1-11 are allowed.

The following is an examiner's statement of reasons for allowance:

None of the prior art references of record disclose or fairly suggest:

A microwave oscillator with very high stability, comprising:

a one-piece dielectric resonator...two lateral flanges, and having drillholes, having symmetry of order N, where N is greater than or equal to four...being covered with a superconducting material...and the tuning of the resonator being done by a magnetic field and a phase loop.

Holme et al. (US 5,515,016) discloses in Fig. 1 a dielectric resonator [38] with 8 symmetrical drillholes, tuned by a tuning probe 62. The resonator does not contain two lateral flanges, is not covered in superconducting material, is not used in a cryogenic chamber and is not tuned via a phase loop.

Sato et al. (5,097,238) discloses in Fig. 2 a dielectric resonator in the form of a right-cylinder frustum (not hollowed out at mid-height), with two lateral flanges [2,4] and a central core [3], and is optionally tuned via hole 6 (see summary of the invention). There is no superconductive material, phase loop, or cryogenic chamber.

Flory (US 5,652,556) discloses in Figs. 3 and 5, a whispering gallery type dielectric resonator [41] tuned by a phase loop [loop through feedback coupler 47 and

phase circulator 43], connected to amplifier 48 and being placed in a temperature-regulated chamber [Fig. 5].

There is no fair suggestion for combination of any of the references of record to arrive at the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
